Applications of Fox Venturi Eductors

CONVEYING WITH: · NO MOVING PARTS · NO BLOWBACK · NO MAINTENANCE

PRODUCT

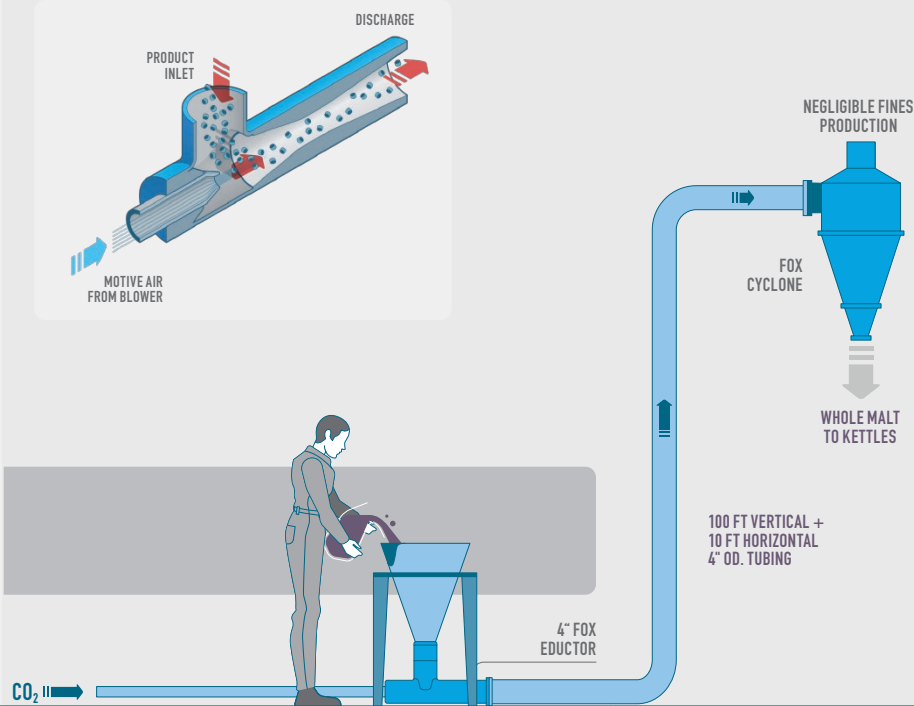

Hop Pellets, Malt, Spices

PROBLEM

A kraft brewery needed to regularly add hop pellets or malt into their 20 - 30 foot high kettles during the beer-making process. They were no longer comfortable with having staff climb up wet ladders with fifty pound bags on their shoulders, to manually dump these products into the vessels.

SOLUTION

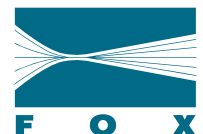

Fox supplied fully sanitary eductors for conveying these products in a completely sanitary system. Many breweries use CO₂ for insert gas conveying so there is no oxidation of these valuable ingredients

Fox can provide a blower + eductor conveying system, cart-or skid mounted to move wherever it is required. Note the small blower and eductor with no moving parts. Control panels can be provided with motor starters, interface and safety locks, and interface with destination level controls.

A CART- MOUNTED
BLOWER + EDUCTOR SYSTEM

Fully sanitary eductors can be provided when required for brewery, food, and pet food applications.
